AI- powered dynamic mental health monitoring and distress prediction system for atrocities victims

A private, accessible and culturally sensitive web application designed for early support.

Problems Faced:-

- People often recognize distress late, hesitate to seek help, or do not know what to do next.
- Existing support is often event-driven rather than longitudinal.
- The high cost of physical therapy binds low profile patients to reach out for help

Our Solution:-

- A guided space for self-reflection, emotional check-ins, coping and support.
- Supportive AI conversation, journal and resources.
- Dynamic distress-risk layer for trend and escalation.
- Human-in-the-loop alerts for defined high-risk conditions.

Why It's Different:-

- Personal baseline; Compare changes with your own usual state, not with a general standard.
- Multimodal-ready: text, voice and engagement signals.
- Privacy-first: minimum data + scoped access.
- Explainable: show why risk moved.

ONE-LINE VALU Monitor continuously → understand trends → intervene earlier → keep humans in control

Technologie To Be Used:-

1. Frontend

->React.js, JavaScript, Responsive UI

2. Backend

->Node.js, Express.js, REST APIs

3. Database

->SupaBase

4. AI/ML

->Python, AI/ML APIs or models

Here, the data flow within the process is shown

Working Prototype:-

FEASIBILITY AND VIABILITY

Practical • Scalable • Sustainable

Risk → Mitigation

FALSE ALARM

Show risk as a signal; use thresholds + human review.

MISSED CRISIS

Safety prompts, escalation pathways and explicit emergency guidance.

SENSITIVE DATA

Consent, data minimization, encryption and scoped access.

BIAS

Evaluate across languages/populations; monitor model drift.

AI OVERREACH

No diagnosis from appearance; no autonomous clinical decision.

Practical Aspects

TECHNICAL:-

- Existing technologies
- React + Node.js
- SupaBase database
- AI API integration

OPERATIONAL:-

- Simple user interface
- Easy onboarding
- 24/7 accessibility
- Automated support

ECONOMIC:-

- Low development cost
- No special hardware needed
- Easy maintenance
- No sign up fees

SCALABILITY:-

- Supports multiple users
- Modular architecture
- Easy feature expansion

Why ManoRaksha?

| Easy to deploy | Easy to scale | Secure |
| AI-assisted | Cost-effective | Accessible |

IMPACT AND BENEFITS

Impact On User

- **Self-Awareness** : Helps users recognize changes in their mood and emotional well-being.
- **Early Awareness** : Highlights possible warning signs so users can seek help earlier.
- **Personalized Support**: Adapts guidance and resources according to individual needs.
- **Better Support Access** : Connects users with appropriate professional and community resources.

Benefits Of ManoRaksha

- **AI-Assisted Guidance** : Uses AI to provide quick insights and relevant wellness suggestions.
- **Private & Secure** : Protects sensitive user information through secure data handling.
- **24/7 Accessibility** : Makes wellness resources and initial support available anytime.
- **Timely Intervention** : Helps identify concerning patterns and encourages appropriate support.
- **One Integrated Platform** : Brings assessment, tracking, resources and support together in one place.

Research

- **The Unspeakable Mind** by Shaili Jain, M.D.
A psychiatrist explores post-traumatic stress disorder (PTSD). The book looks at how violent and unspeakable experiences fracture the mind and how recovery is possible.
- **The Body Keeps the Score** by Bessel van der Kolk
This widely read book explains how trauma impacts both the body and the mind, offering alternative paths to healing.
- **World Health Organization (WHO):**
Provides global data, policies, and initiatives regarding brain health and well-being
- **Tele-MANAS:**
India's free, 24/7 national tele-mental health service offering confidential counselling by trained professionals (toll-free via 14416).
